

KPI Dashboard Program

I made this project during my coop training at Saudi Aramco company

Project Overview

This project has required me to create an automated dashboard that displays essential information to the stakeholder on daily bases

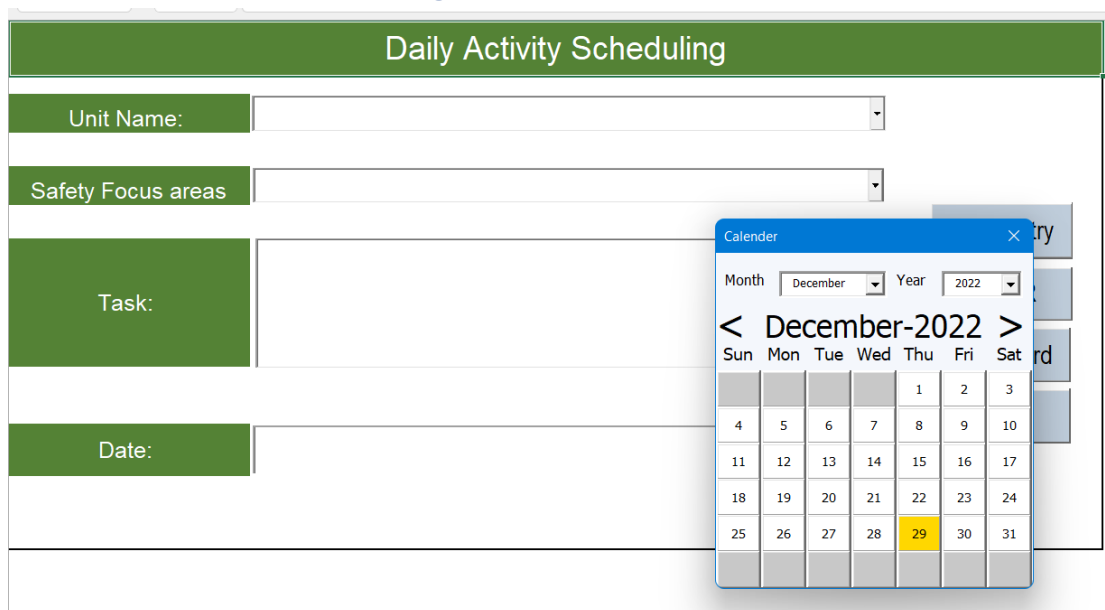

The first page is a Task Insertion Form:

The screenshot shows an Excel spreadsheet titled "Daily Activity Scheduling". The form is structured as follows:

- Unit Name:** A dropdown menu.
- Safety Focus areas:** A dropdown menu.
- Task:** A large text input area.
- Date:** A date input field with a calendar icon.
- Buttons:** Four buttons are located on the right side: "Save Entry", "CLEAR", "Dashboard", and "Display".

The calendar icon to assign deadlines for tasks:

This screenshot shows the same "Daily Activity Scheduling" form, but with a calendar pop-up window open. The calendar is for December 2022, and the 29th is highlighted in yellow. The form fields and buttons are visible in the background.

The tasks of the current day will show on this page:

Daily Morning call activities			
unit name		Task Type	Task
JP&SU		Safety Training	Application Test
YP&SU		Construction & Contractor Safety	Test
			Date
			8/23/2022

Finally, it's a Dashboard Report
